*****Preserve the luminance of the image:**** This option enables you to adjust the luminance of the image. You can recover the original white, gray, or black color from an image. Be careful, though, as changing this option may lead to image distortion if too much luminance is restored. *****Change colors with curves:**** This option corrects color levels in an image. You have a control to change the brightness and contrast of the image. *****Ensure color accuracy:**** Enabling this option corrects the color levels of an image. *****Automatically correct color casts:**** Using this option, Photoshop automatically corrects color casts from your camera or monitor. *****Match color to monitor:**** If color values of your images don't match the values of your monitor, then this option can help. *****Change the vibrance of colors:**** The vibrance option adjusts the brightness of colors in an image. You can simply increase or decrease the value of the image. *****Change sharpness:**** This option lets you adjust the image's sharpness. To create a sharper image, select a greater value for the option. *****Change image contrast:**** This option lets you increase or decrease the contrast of an image. If you increase the contrast, then shadows and highlights on your image become brighter and darker, respectively. *****Change shadows and highlights:**** Using this option, you can increase or decrease the levels of shadows and highlights. *****Change shadows and highlights and recover luminance:**** This option lets you change the levels of shadows and highlights, and in the process, restore the luminance of an image. *****Flatten image:**** When you flatten an image, you make the image look like a print. The background color of the image disappears and the foreground colors of the image appear in the image. *****Recolor image:**** This option lets you change the foreground and background colors in an image. It works best when you use this option with a color palette or gradient. In the Layers panel, you are able to selectively turn on and off individual image layers. Figure 16-2 demonstrates the Layers panel and its layers. Click the image thumbnail in the Layers panel to open or close the panel. FIGURE 16-2: Click the Layers panel to turn layers on and off. The software also allows the user to do a few other things; like print, layout, and design. The Photoshop software has been downloaded over 100 million times since its launch in 1992. The most recent version is Photoshop CC 2018, or Photoshop CC for short. Photoshop CC can be downloaded as a free 32- or 64-bit version from Adobe.com. Adobe Photoshop is used for two main reasons. One is to make images look good. It takes a lot of work to make photos look nice. Photoshop CC can help. Adobe Photoshop CC 2018 currently has two versions. The other is to make images look like they belong in magazines. Pictures that are taken with a cellphone camera usually look noisy and out of focus. Therefore, the majority of smartphone cameras have an option to make the picture look better. That option is known as image enhancement. The internet has many internet meme pages that come in different designs. Some of them are done with Photoshop and you can view them through various internet browsers. Adobe Photoshop software is commonly used by people that are working with content that can take up a lot of disk space. For example, graphic designers or web designers. If the designer is only designing one image, then they may not need to save it to disk. However, if the designer is creating a series of designs for a whole website, he or she will need to save them in an organized fashion. This is accomplished through saving the image files to disk. Photoshop is used to store photos for a camera or to create a photo album. Photographers also use Photoshop to change the color and other settings on photos. At times, large amounts of photos are needed at once. This is called a shoot. The photos are taken and then stored in Photoshop so that the photographer or graphic designer can organize and edit the photos later. The most important thing to remember when using Photoshop software is to 05a79cecff

Q: Find the number of linear orders on $\{1,2,3,4,5,6,7,8,9,10\}$ Find the number of linear orders on $\{1,2,3,4,5,6,7,8,9,10\}$ My approach I know that the answer is $\frac{15!}{2!3!}$ I have to choose 3 places for 1,2,3 and 3,4,5 for 4,5,6,7,8,9 and 10 and then I have to choose the orderings of each. But since 9 is the element bigger than all the other elements, I assumed that after removing the 2,3 before 9, the sets: $\{4,5,6,7\}$, $\{5,4,6,7\}$, $\{6,7,4,5\}$, $\{7,6,4,5\}$, $\{4,7,6,5\}$, $\{5,7,6,4\}$, $\{6,4,7,5\}$ are the number of choices for each set. The number of choices for the sets: $\{5,6,7,4\}$, $\{6,7,4,5\}$, $\{7,4,6,5\}$, $\{4,7,6,5\}$, $\{5,7,6,4\}$ are given as: $4! \times 10! \times 5! \times 5! \times 10! \times 10! \times 4! \times 10! \times 4! \times 10!$ Hence, $\frac{15!}{2!3!} = 2005$ Is this correct? A: We give each of the 15 numbers a 0 or 1, respectively, on even and odd places in some ordering. We only need to arrange the 10s and 9s in the 2 places the 9 occupies and then choose the 3-cycle and 6-cycle without 9. Therefore the number
