Changing your image size Often you want to change the size of your image, perhaps to alter its proportion or scale. For example, if you want to make your photograph look smaller, you can shrink the file to a smaller size. Don't forget, however, that a smaller image also has less pixels on the screen when you print or display your file. The result is that fine details in your photograph are lost with a larger file. For example, a small head or tiny flower may lose their fine detail when you enlarge your image by 200 percent. To change the file size, Photoshop offers several options, from shrinking your image to increasing its size. Figure 3-5 shows how to shrink and enlarge an image in Photoshop. FIGURE 3-5: To shrink or enlarge an image, simply move the Resize and Crop tools to the desired position. To change the size of the image in the tools, follow these steps: 1. \*\*Open your image or select it from the open file window.\*\* 2. \*\*Click the Resize tool, as shown in\*\* **Figure** **3-5** **.** 3. \*\*Choose the Resize command from the tool's drop-down menu.\*\* You can also just press Ctrl+T to open the Resize dialog box and then click the smaller (downward-pointing triangle) icon. 4. \*\*The Resize tool and the Resize dialog box appear.\*\* In the Resize dialog box, shown in Figure 3-6, you can set the new size for the image. You can also click the Arrange New Size button to apply a new, customized resolution to your image. (We explain the Arrange New Size feature more in Step 6.) 5. \*\*Click OK or enter a size and click OK.\*\* The image is resized, and an alert box appears at the bottom of the screen. Your image now has the new size you specified. You can also resize an image by dragging it to a new size in the image window or on

Q: How to use NSMutableArray on 3.5 project I need to do this in a 3.5 project : but for the pre 3.2 I need NSMutableArray.. As I see on link above, the best way is to use NSMutableArray (not NSArray) and add objects to it. The tutorial says to add this to NSObject header file. for more information about NSObject, see this link : Please tell me if there is any way to do it for 3.5 project. A: I think you should not mix the code which works for Xcode 2.2 with the code which works for Xcode 3.2. The NSMutableArray is not available for Xcode 2.2, so you should use the NSArray. The NSMutableArray is really very handy and necessary, especially if you like to customize it. You can implement some additional functionality to your array in your.h file. Q: JPA @Query scroll() in JPA I have the following query in JPA: @Query(value = "SELECT " + "a, b FROM " + "Entity e JOIN FETCH e.childs a, " + "e.children b WHERE a.prop1 LIKE :prop1 " + "AND b.prop1 LIKE :prop2 " + "ORDER BY a.prop1", nativeQuery = true) @Query(value = "SELECT " + "a, b FROM " + "Entity e JOIN FETCH e.childs a, " + "e.children b WHERE a.prop1 LIKE :prop1 " + "AND b.prop1
