-Crested GreyhoundQ: Sphinx `index` the next index as the end of index I am making an API using Sphinx, and I am wondering if there is a way to combine search results from multiple indexes. At the moment I have the search index with some keywords, and the search results contains the links to the products that contain those keywords. Now I want to have an index combining the search results and a second index containing a list of all the products, and want to combine them at the end of the index. Is there an easy way to do this, such as using "index combined" as the end of the index? Thanks for the help. A: Add an id column to the combine index which will be the product id for each record. You can also drop the id's from the index, but since Sphinx is lazy, it will still not index records that don't have an id. Add a query to each search index where an ORed id column is used. If you set up the params you can combine the results from all the separate indexes. See

According to the Financial Times, the London office boasted last year that it dealt with 500 million counterfeit notes a year, or about 140m last year. The US State Department told the paper the situation is far worse: it said that, at the peak of the counterfeiting problem, a staggering 100 billion dollars' worth of notes circulated annually, leaving the US Foreign Office to deal with 5.5 billion dollars of it. The \$100 billion estimate, which is based on the profit taken by the most prolific counterfeiters and assumed a total circulation of 1.6 billion counterfeit notes, is particularly alarming when you consider the potential harm these notes pose. Not only could you be kicked off a flight after discovering you've been handed a fake dollar, but you may even be able to travel to countries with stricter anti-counterfeiting laws than the UK (namely Canada, Australia and New Zealand). "Because both the US and Britain's banking systems stopped using paper bills in the 1960s, the security mechanisms used to protect banknote designs in both countries do not offer much of an effective deterrent against... counterfeiting," writes author and specialist in fake currencies Wolfgang Schieck. Operation Counterfeit Deterrence (OCD), the most common method of stopping counterfeit money, relies on these security features. It involves a hidden banknote number that can only be seen when it's fully separated from the rest of the note - something commonly achieved when most

Yuito is a man in a constant state of emotional distress. He is Japanese-American, and estranged from his father. Yuito often feels overwhelmed by his heritage, and the complications in his life that stem from it. This is a story of discovery. Yuito embarks on an adventure to fulfill a promise to his father, and perhaps learn something about his own life. This game is about finding self-acceptance, self-worth, and himself. It is about beingness, and the powers of imagination. This is a first person game about a child, dreaming of grandeur and getting lost in the process. At its core, it is a traditional platformer with light movement, light platforming, and dialogue. But the protagonist is a child, with the resources of a toddler, which adds to the wonder and possibilities. If there is one thing that a Yuito fan should remember, it is that this is an anime, and is driven by emotion and aesthetics. Enjoy! Welcome back to Yui's Abode. And welcome to Yui's World! From developer Melos Han-Tani, the creator of the award-winning hit adventure game Anodyne (2011). One of the best casual titles for the PS4, and available on PSN at \$2.99. Melos Han-Tani thought he had left Destiny of an ordinary girl behind in the year 2000. But destiny is a fickle thing, and in 2019 he makes a promise to himself, that he will be a better father to his daughter than he was. A promise he soon regrets. The game takes place in a world built on one of Melos' most treasured and well-known studio, Toei Animation's, first anime series - Pokémon. The opening song of the original anime, "Aurora, the Water Pokémon" by Keiko Ōta, is the theme song. So this game was made with love for that series. Melos Han-Tani would like to thank his wife Nori for supporting the project on many levels, and the whole Hype Magazine staff for their invaluable feedback on the game. a soul = a feeling, an emotion, a way of thinking. The term "soul" has a specific definition, and varies by different cultural contexts. It might be a self-identity as social-cultural or nationalistic based on (subjective) gender, racial, or religious
