There is a secret that was discovered by our explorer Tim, who must go back to the year 3145 and learn the truth! Tim has an update! “Using the power of the first portable 3D printer, Tim’s Smartphone, he has been able to evolve the TIM 3.4 desktop replacement and reinvent the Tim 3.3 tablet. By the year 3145, the Earth’s natural resources have been exhausted and the fires of nuclear war are roaring across the planet. Tim knows that this couldn’t possibly be the end, and he is certain that he must find a way to prevent the end of civilization. Tim’s black box contains precious clues, which will help him decipher this mystery...” “If someone were to review this at launch it would be like reading the most ridiculous sci-fi novel ever written. Now... let’s talk about the game itself. My reaction to

this game was interesting. It took me a couple of goes to get into it. I don't know why that was, but it seemed to be a recurring issue during the course of my play. The first thing I realized was that this game is about being Tim and this Tim is made up of several different Tims. The first Tim is the Tim from 1987. He creates the map of the future. Then, the second Tim is the Tim from 2014. He must go back and retrieve Tim 1's map. This seemingly minor aspect of the game, can actually be the game's central theme. The first Tim is an engineer, while the second Tim is a scientist and the main character of the game. When you learn the story in the beginning, this becomes more apparent as it progresses. The story is written in a manner that is similar to classic time travel stories, such as *Time After Time* by Richard Matheson. It's told from a third person perspective while you're

playing, rather than a first person perspective as with most video games. This change of perspective initially left me confused, as I had to spend a little time getting used to it. As the story unfolds, it becomes clear why this decision was made. The main game concept is very simple, but there's something compelling about the approach that makes it work. Also, it's a little more interactive, as Tim has to make choices throughout the game. It's not just
