How can I open it in Safari? A: I hope you dont mind me answering my own question... Apparently this is a fake file. Its a rar file compressed with the pdf extractor. "Scans is a command-line program that scans a file for the presence of any PDF file and outputs the location of each such file. This can be used to look for newer, more up to date versions of already installed Adobe Reader files." # 2007 September 6 # # The author disclaims copyright to this source code. #

```
#*****  
# This file implements regression tests for SQLite library. The # focus of  
this script is testing that the library does not crash with # a corrupt  
database file. It does so by attempting to write an # empty database file  
(and corrupting the file while it is being # created), then verifying that the  
library still works correctly. # # $Id: corrupt.test,v 1.2 2007/07/30  
22:52:40 drh Exp $ # set testdir [file dirname $argv0] source  
$testdir/tester.tcl # The following line is a heuristic for testing that the  
library works # even when a database file is corrupted. The file is
